AI Product Engineer | Multi-Agent Systems & Full-Stack Development

www.leeable.dev

PROFESSIONAL OVERVIEW

About 2 years shipping production software at a publicly traded HR/payroll SaaS company, now building AI products end to end. Designs and deploys multi-agent systems that automate real-world workflows — identifying where agents add leverage and shipping autonomous pipelines that run unattended. Operator/founder mindset (self-taught since age 12) with strong system-design instincts. Bilingual in English and Korean.

SKILLS

Multi-Agent Systems
Workflow Automation (n8n)
Node.js / PHP / Python

LLM Tool-calling / MCP
LLM APIs (Anthropic, OpenAI)
MySQL / PostgreSQL / Supabase

Prompt & Harness Engineering
React / Next.js
Docker / Git / Vercel

WORK EXPERIENCE

Independent AI Product Engineer (Building in Public) | Remote Apr 2026 – Present

- Designed and built a production multi-agent AI system (15+ agents, orchestrator → specialist hierarchy) on the Pi/OpenClaw runtime, with a plugin-based harness layer (PreToolUse/PostToolUse hooks) and MCP integrations (Notion, Google Workspace).
- Shipped a fully autonomous pipeline that crawls, scores, and routes 2,000+ records daily with zero manual intervention (Data collection → n8n cron → Supabase → LLM evaluation → Notion/Discord).

Software Developer II → III | Paycom, Irving, TX Nov 2024 – May 2026

- Fast-tracked to Software Developer III and awarded a performance bonus for standout delivery as the most junior team member; served as Lead Dev / Lead Tester on 20+ test-execution and 200+ development tickets.
- Designed and shipped an end-to-end system automating jurisdiction selection from candidate data, owning the database schema, third-party API integration, and a new data model across 14 stories.
- Delivered a multi-module compliance feature end to end under a 3-week deadline, designing a progressive-disclosure UX that guided users through complex eligibility flows while handling edge cases cleanly.
- Built an internal harness for AI-assisted development in a security-restricted environment, standardizing and enforcing safe AI coding workflows across the team.

Research Assistant — Web Developer | University of Kansas, Lawrence, KS Jan 2023 – Aug 2024

- Rapidly built and iterated MVP healthcare web apps for diabetes management with a UI/UX faculty researcher, turning real patient-survey feedback into user-focused interfaces (Next.js, React, Vercel).

EDUCATION

B.S. Computer Science | University of Kansas, Lawrence, KS Aug 2020 – May 2024

- Engineering Scholarship · GPA 3.6/4.0 · Certificate in Entrepreneurship (Product & Venture Development)

Kansas Academy of Mathematics and Science | Fort Hays State University, Hays, KS Aug 2018 – May 2020

- Dean's Honor Roll · GPA 4.0/4.0 · Full-Year Academic Scholarship
